## Rattlesnake Less Dangerous Than Summer Fly

Do not mind a rattlesnake or two about the house, but if you value your life and the lives of your children, KILL EVERY FLY. In the war against the fly, cleanliness is the heavy artillery, vigilance the machine gun, and determination the Manner. This is the way the District Health Department puts up the fly question to residents of the District. The health officers say the extermination of the winter fly is the duty of the housewife and of every one else. Every insect should be killed before the hot weather sets in, for the winter fly is the parent of summer's destructive swarms.

The progeny of a single pair of flies, assuming that they all live, if pressed together at the end of the summer, would occupy a space of over 14,000,000 cubic feet. This shows the incalculable possibilities of a single fly, and how vital it is to destroy the winter hold-overs.
